

ABSTRACT

Projectiles and projectile systems are provided herein employing an inhibiting and/or marking substance for
5 impairing/markings a living target. In some embodiments, the systems include a first part being non-spherical and having an exterior, a plurality of stabilizing fins secured with the exterior of at the first part, and a second part have a hollow portion containing an inhibiting substance, wherein the second
10 part is sealed with the first part to seal the inhibiting substance within at least the hollow portion. The first part can similarly have a hollow portion such that a volume is defined by the hollow portion of the first part and the hollow portion of the second part, wherein the inhibiting substance is
15 contained within the volume. The fins can be angled to provide spin stabilizing.
